

Claims

1. A plasma display panel comprising:

a first dielectric layer for covering a display electrode which is formed on a front substrate and which consists of a scan electrode and a sustain electrode; and

a second dielectric layer for covering a data electrode formed on a back substrate, wherein

at least one of a periphery of the first dielectric layer and a periphery of the second dielectric layer has a radius of curvature of other than 0.

2. The plasma display panel according to claim 1, wherein

at least one of the first dielectric layer and the second dielectric layer is formed by firing a precursor material layer transferred from a transfer film.

3. The plasma display panel according to claim 1 or 2, wherein

at least one of the first dielectric layer and the second dielectric layer is formed by firing a precursor material layer having photosensitivity.
